

# Leveraging HPC for Alzheimer's Research and Beyond

Joseph Lombardo

Executive Director, UNLV's National Supercomputing Center

September 2015

- **About the NSCEE @ Switch**
- **Computing Challenges**
  - Spotlight on Alzheimer's Research
  - Other Research Areas that Benefit from HPC
- **Solution with Altair PBS Professional**
  - Project Highlights
- **Next Steps**

## About the NSCEE

- **Full-service** supercomputing facility
- **Mission** for excellence in education and research in supercomputing and its applications
- **Provides** supercomputing training and services to academic and research institutions, government and private industry
- **Supports** energy, the environment, medical informatics and health care
- **Serves** researchers at the University of Nevada Las Vegas and other statewide, nationwide and global research

- In Q4 2014, UNLV moved its NSCEE facilities to Switch facility in Las Vegas
- Hosted on Cherry Creek system – large Intel system for scientific and economic R&D
- 26,000 compute cores
- Intel Xeon E5-2697v2 12C 2.700GHz, Intel Truscale, Intel Xeon Phi 7120P
- Dedicated Research Network (DMZ) with 200Gb/s potential

Joe Lombardo - Executive Director of National Supercomputing Center for Energy and the Environment, UNLV  
John White - EVP and Provost, UNLV | Don Snyder - UNLV President | Bryan Wolfe - VP, Managing Director, Intel Capital | Rob Roy - CEO and Founder, Switch | Charlie Wutschpard - VP, Intel | Dr. Mark Seager - CTO, Intel  
Martin Leslie - Business Development Manager, Intel | Jason Mendenhall - EVP of Cloud, SUPERNAP

## Switch SUPERNAP and Intel Partner with UNLV to Boost Scientific Research and Economic Development

*Intel's "Cherry Creek" supercomputer brings world-class computing power to UNLV; Switch SUPERNAP to lead high-tech industry partnerships.*

# NSCEE Computing Challenges

- **Numerous and complex workloads**
  - Hundreds of projects worldwide
  - Highly compute-intensive research
- **Massive data needs**
  - Users must access massive data remotely to do their work
- **Time-sensitive projects**
  - Many NSCEE projects have critical governmental and environmental significance, so timely and reliable performance is a key requirement

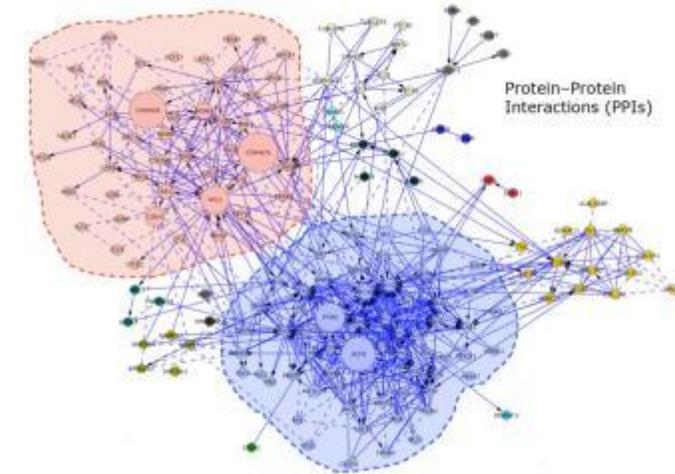

***Thus, a powerful and reliable infrastructure is a key requirement!***

- **The need for innovation**

- Alzheimer's Disease continue to cause tremendous familial, social, and economic burdens to modern society
- Despite substantial progress, existing treatment approaches are limited – so new therapeutic approaches are desperately needed

- **The NSCEE project**

- NSCEE works with researchers to compare genomes of Alzheimer's patient with normal patients
- **Challenge:** Researchers wanted to enhance the statistical power of previous analyses by including more than 10,000 additional patients (and thus genomic data sets) in the study – *meaning a massive leap in computational requirements*

## Alzheimer's Project Results

- **Reduced overall runtimes for processing workload**
  - PBS Professional in conjunction with Rocks and an improved system with shared memory compute node, reduced processing time by **more than 50%**
  - Alzheimer's project researchers can process a genome in about **3 hours instead of the 8+ hours** it previously took
- **Fast, easy implementation**
- **Powerful, flexible customization capabilities** -- can be easily extended by adding site-specific processing plugins/hooks
- **Improved system manageability and extensibility:**
  - Lightweight solution
  - Very easy to manage
  - Not dependent on any specific operating system

*"PBS Professional has **simplified the administration** of our compute clusters immensely. What used to cause problems with our old workload management software is now **simple**."*

*In addition, Altair is an **outstanding supplier and partner** -- their responsiveness and support have made a huge difference and really **differentiate** them from our previous supplier."*

*--Ron Young, Research support analyst at NSCEE*

### Quantum Dynamics of Chemical Reactions

- HPC dramatically improves ability to understand how atoms and molecules interact and the chemical reactions that occur in different environments
- Researchers use complex theoretical calculations to explore how molecules behave at absolute zero temperatures and other conditions

### Fracking

- Hydraulic fracturing often takes place >1 mile below groundwater supplies
- Mechanical engineers use sophisticated numerical models to more accurately predict prime locations for extraction and assess possible contamination associated with the process

### Magnetically Dominated Jets in Gamma-Ray Burst

- Gamma-ray bursts are the most luminous, and violent, explosions in the universe -- they signify the deaths, collisions or swallowing up of stars
- Astrophysicists' computational research advances our understanding of the physical mechanisms behind GRBs and other high-energy astrophysical phenomena

# HPC Scheduling Solution: Altair PBS Professional

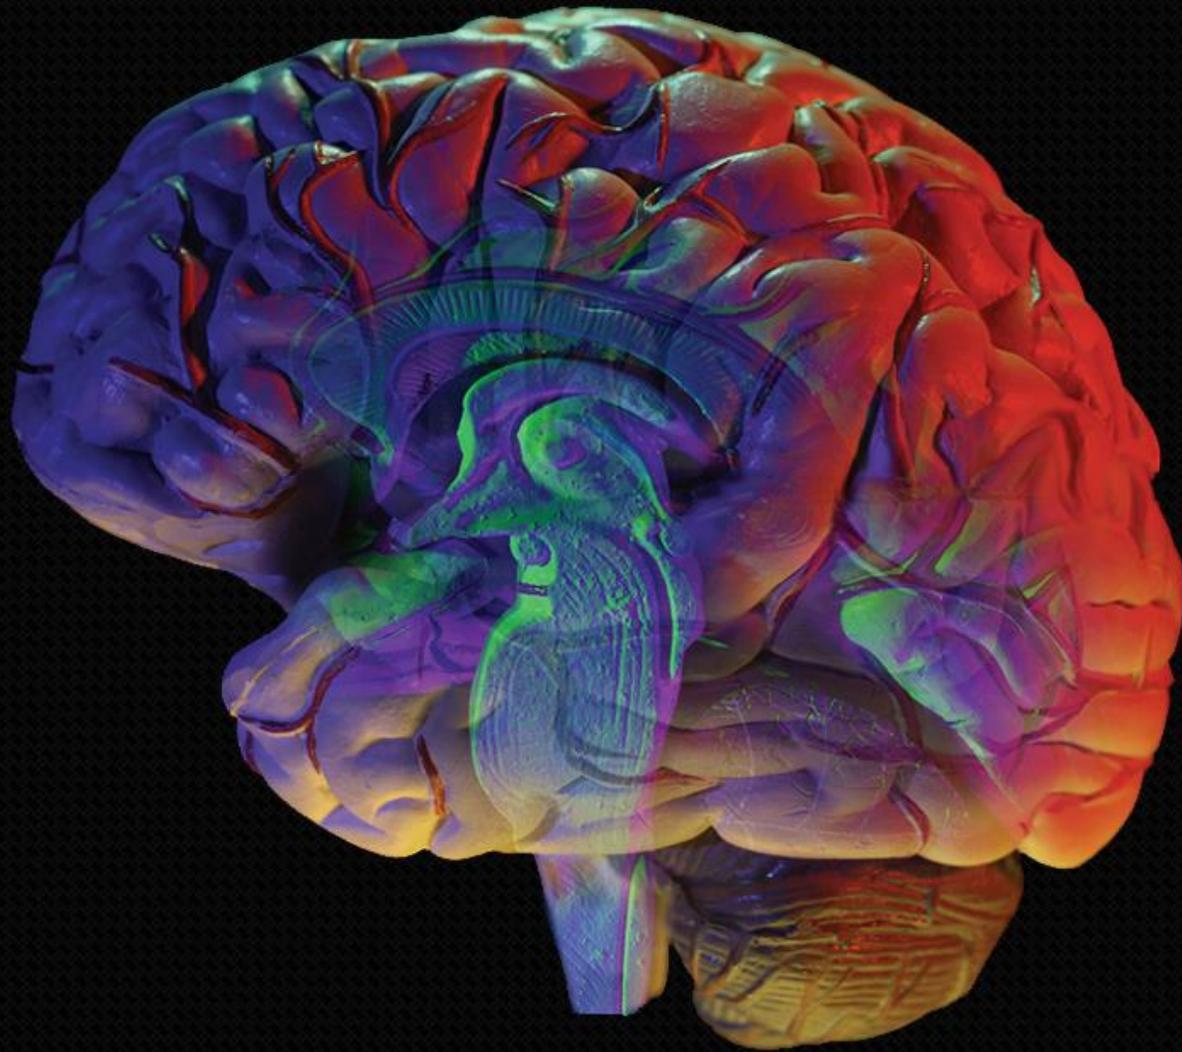

- **Market-leading workload manager**
  - Proven for 20+ years at thousands of sites
  - Fast, easy implementation
  - Powerful, flexible customization capabilities
  - Simplified management
  - PBS Works suite won “Best HPC Software” in 2014
- **Reliable vendor**
  - 30-year track record of customer satisfaction
  - Global presence with 40+ offices in 22 countries
  - *“Altair is an outstanding supplier and partner -- their responsiveness and support have made a huge difference.”*
